Combinatorica Graph and Permutations functionality has been superseded by preloaded functionality. The package now being loaded may conflict with this. Please see the [Compatibility Guide](#) for details.

Introduction

The following is quantitative analysis of *Mathematica* 8.0 in terms of what functions and symbols it contains. This includes all the AddOns package which come with *Mathematica* 8.0 outside of the kernel and have to be loaded to be used. These packages are standard packages that come with *Mathematica*, but are not inside the kernel itself. These are the packages listed in “Wolfram/Mathematica/8.0/AddOns/Packages”

Finding a list of just the functions (i.e. not just Symbols) was a bit tricky. This is how this was done

- 1) Run the notebook called `getUsageMessages.nb`, located in this folder.
- 2) Select all the output cells, COPY AS TEXT, then put the result in plain text file called “`packagesFunctions.txt`” in the same folder as this notebook
- 3) Open this notebook (called `process.nb`) and run it. It will read the text file and process it.

Thanks for John R. Fultz for suggesting in the Math group to use `SyntaxInformation[]` and the Usage message to help determine which Symbols are functions and which are not.
