1 Problem 1

Compute an appropriate sampling rate and DFT size $N=2^v$ to analyze a single with no significant frequency content above 10khz and with a minimum resolution of 100 hz

1.1 Solution

From Nyquist sampling theory we obtain that sampling frequency is

$$f_s = 20000 \ hz$$

Now, the frequency resolution is given by

$$\Delta f = \frac{f_s}{N}$$

where N is the number of FFT samples. Now since the minimum Δf is 100 hz then we write

$$\frac{f_s}{N} = \Delta f \ge 100$$

or

$$\frac{f_s}{N} \ge 100$$

Hence

$$N \le \frac{20,000}{100}$$
$$\le 200 \text{ samples}$$

Therefore, we need the closest N below 200 which is power of 2, and hence

$$N = 128$$

2 Problem 2

sketch the locus of points obtained using Chirp Z Transform in the Z plane for $M=8,W_0=2,\phi_0=\frac{\pi}{16},A_0=2,\theta_0=\frac{\pi}{4}$

Answer:

Chirp Z transform is defined as

$$X(z_k) = \sum_{n=0}^{N-1} x[n] z_k^{-n} \qquad k = 0, 1, \dots, M-1$$
 (1)

Where

$$z_k = AW^{-k}$$

and $A = A_0 e^{j\theta_0}$ and $W = W_0 e^{-j\phi_0}$

Hence

$$z_k = \left(A_0 e^{j\theta_0}\right) \left(W_0 e^{-j\phi_0}\right)^{-k}$$
$$= \frac{A_0}{W_0^k} e^{j(\theta_0 + k\phi_0)}$$

Hence

$$|z_k| = \frac{A_0}{W_0^k}$$
$$= \frac{2}{2^k}$$

and

phase of
$$z_k = \theta_0 + k\phi_0$$

= $\frac{\pi}{4} + k\frac{\pi}{16}$

Hence

k	$ z_k = \frac{2}{2^k}$	phase of $z_k = \frac{\pi}{4} + k \frac{\pi}{16}$	phase of z_k in degrees
0	$\frac{2}{1} = 2$	$\frac{\pi}{4} + 0 \times \frac{\pi}{16} = \frac{\pi}{4}$	45
1	$\frac{2}{2} = 1$	$\frac{\pi}{4} + 1 \times \frac{\pi}{16} = \frac{5}{16}\pi$	56.25
2	$\frac{2}{4} = \frac{1}{2}$	$\frac{\pi}{4} + 2 \times \frac{\pi}{16} = \frac{3}{8}\pi$	67.5
3	$\frac{2}{8} = \frac{1}{4}$	$\frac{\pi}{4} + 3 \times \frac{\pi}{16} = \frac{7}{16}\pi$	78.75
4	$\frac{2}{16} = \frac{1}{8}$	$\frac{\pi}{4} + 4 \times \frac{\pi}{16} = \frac{1}{2}\pi$	90
5	$\frac{2}{32} = \frac{1}{16}$	$\frac{\pi}{4} + 5 \times \frac{\pi}{16} = \frac{9}{16}\pi$	101.25
6	$\frac{2}{64} = \frac{1}{32}$	$\frac{\pi}{4} + 6 \times \frac{\pi}{16} = \frac{5}{8}\pi$	112.5
7	$\frac{2}{128} = \frac{1}{64}$	$\frac{\pi}{4} + 7 \times \frac{\pi}{16} = \frac{11}{16}\pi$	123.75
